Description:

Throughout the Middle and Far East, the saline water table is high. Historically, basements suffer water leakage which becomes apparent at the completion of construction. PmB, due to its advanced physical qualities, is the solution to this problem.

Although, initially, more expensive than conventional products, the rapid installation of the PmB membrane, even around difficult construction profiles, shortens basement construction periods and ensures integrity and durability. This prestigious project utilised some 14,000 square metres of PmB to ensure the future integrity of the basement negating the almost relentless and more normal necessity of crack injection repairs. In terms of cost in use, PmB is the winner over conventional products.
