Description:

Due to the harsh equatorial UV environment, this flat roof, with irregular profiles, was subject to constant thermal movement. The conventional materials used in the original construction, and subsequent repairs, were incapable of dealing with the problems. The solution was a totally bonded elastomeric coating capable of absorbing the substrate movements without fracture.

PmB UV grade, due to the inbuilt qualities of longevity, elongation, chemical resistance, resilience and high bond capability, was the material put forward by Pitchmastic as the solution. The client now has an effective roof seal engineered for longevity.

Application - 3mm PmB UV grade followed by non-slip heat dissipation layer of aggregate.

Waterproofing
