Project : Osgodby Service Reservoir

Location: Scarborough, United Kingdom

Client: Yorkshire Water Services Ltd

Main Contractor: Birse Construction Ltd

Planning Supervisor: Babcock water Engineering Ltd

Image:

Description:

This new underground reservoir was designed to have a capacity of 6.4 million litres of drinking water. In order to prevent the ingress of contaminants and untreated ground water entering this reinforced concrete structure, PmB was spray applied over the concrete roof and partially down the perimeter walls.

The PmB system, with its excellent crack bridging abilities, high adhesion values and rapid installation rates, provided an ideal solution for the client. The 1500m² roof was completed to the full satisfaction of the client and contractor concerned.
