Project: **River Suir Bridge**
Location: **Ireland**
Principal Contractor: **Ascon**

Suites you *Suir!*

Pitchmastic PmB delivers fast and effective waterproofing solution

The project includes a new cable stay bridge with an overall length of approximately 475 metres. The new Suir Bridge is a distinctive and impressive structure and possesses a light and elegant design complementing the river and surrounding landscape and will be the second structure of this type on the national road network. The highly impressive Boyne Valley at Drogheda, which opened in June 2003, was the first such cable stayed bridge and was also waterproofed by Pitchmastic PmB.

Ascon (Principal Contractor) awarded Pitchmastic PmB with the sub contract works to supply and install 15,000m² of PmB waterproofing to various road bridges and culverts at this site.

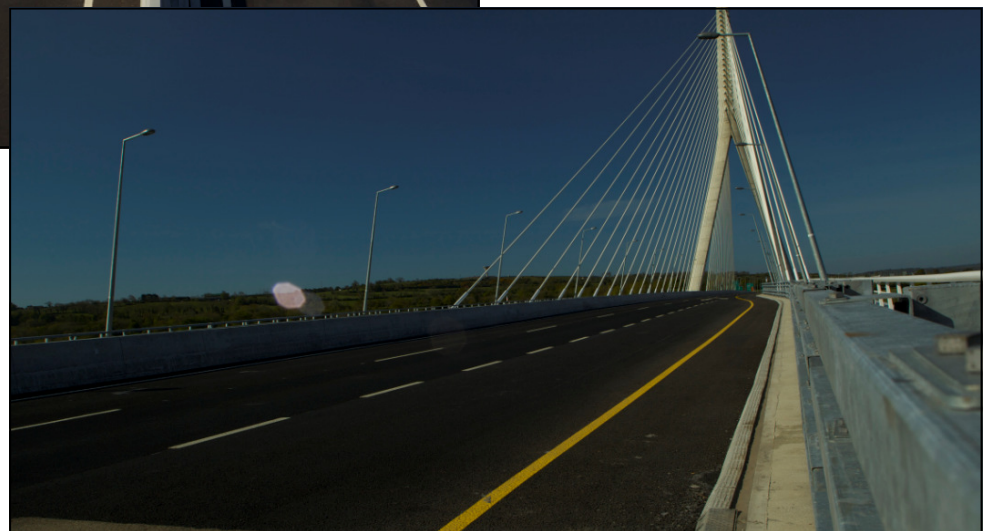

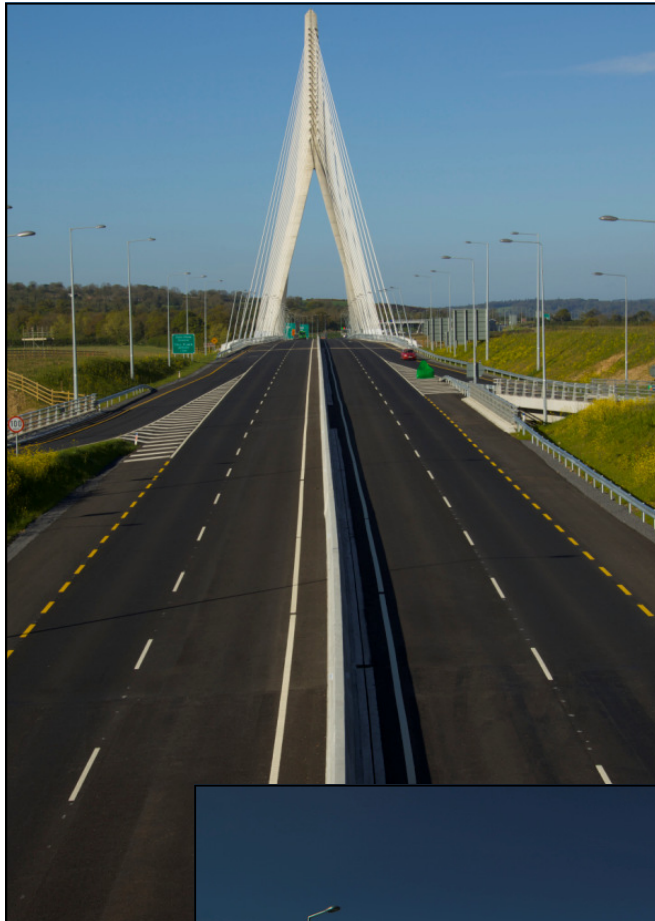

PmB is a high performance polyurethane waterproofing membrane which proved ideal for installation on this project. Not only does PmB create a seamless waterproofing barrier to combat the effects structural corrosion caused in part by the harsh inclement weather conditions in Ireland, its quick and easy installation and rapid curing properties proved essential in keeping the project on schedule.

**Bridges and
Highways**

On the back of the success Pitchmastic PmB have had working alongside Ascon and National Roads Authority (NRA) they were awarded further waterproofing contracts on the neighbouring N9/N10 and the N21 Castle Island projects which Pitchmastic undertook using their own team of highly skilled operatives.

Rail infrastructure

All projects were completed on time and to schedule thus meeting the complete satisfaction of the client.
